Corporate Introduction

Midea Group

From its humble beginnings in 1968, Midea has developed into a large corporation, covering HVAC, appliances, lighting, industrial components, logistics, and real estate. Its 40 years of relentless growth has brought its global turnover to \$14 billion USD in 2009. Consequently, Midea has created over 150,000 jobs both within China and all over the world. In addition to providing affordable goods to consumers worldwide, Midea is also a responsible corporate citizen, and has contributed to several social causes.

Midea believes in creating value through rapid response to market demands, cost-efficient operations and consumer satisfaction. As a result, Midea wields vast production capacities to meet these demands, a fully integrated manufacturing process, and a comprehensive range of affordable, high-quality products to serve its global customers.

Today, Midea is a home appliance leader in China. The company continues to actively globalize its operation by opening plants in Vietnam, Belarus and Egypt, as well as several forthcoming plants in the future in order to be closer to the market and offer better products and services.

Midea TID

As a key part of Midea Group, The International Division (TID) of Midea Air-conditioning and Refrigeration Sector is a comprehensive export platform for residential/commercial air-conditioner, washing machine, refrigerator and heat pump water heater, providing best class service to customers worldwide.

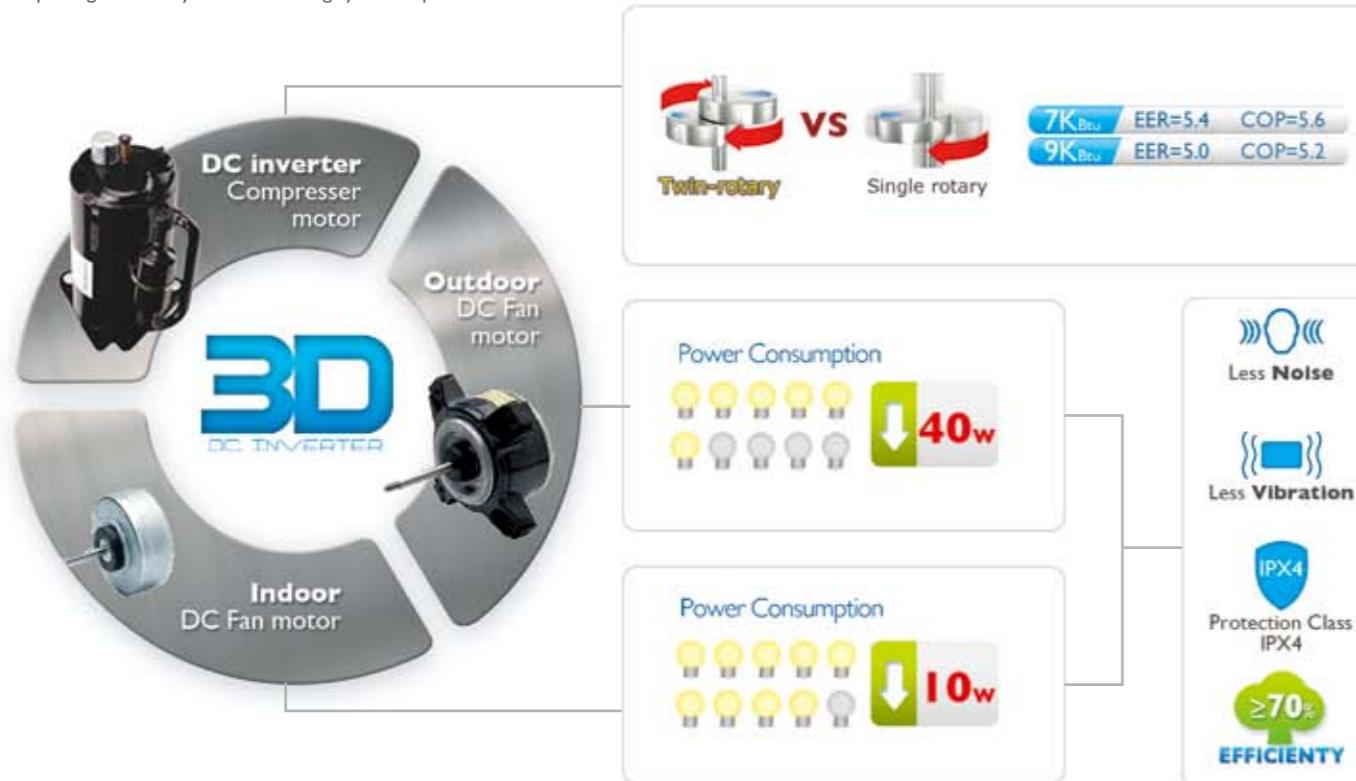

Attribute to the belief and core value of "Safety, Quality, Cost, Efficiency", Midea TID has achieved significant growth in global market and successfully maintains its leadership in RAC, CAC, washing machine and refrigerator exports. With its competitive advantages of innovation, production capacity and dedicated services, Midea TID is nowadays regarded as a leading white goods supplier in the international market.

High Efficiency

3D DC Inverter

With the combination of advanced inverter driving technology, EEV metering device and DC twin-rotary compressor, the desired super high efficiency air conditioning system is possible.

Electronic Expansion Valve

Compared with conventional throttling by utilizing capillary, Electronic Expansion Valve (EEV) makes the refrigerant volume reasonable in the air conditioner system. Under the control of microcomputer, this device throttles up or down the refrigerant precisely according to the actual load situation, which optimizes the use of heat exchanger and improves energy efficiency. Furthermore, EEV extends the flexibility of the air conditioner, improves performance under different temperature condition especially heating operation in extreme low temperature, also makes the room temperature control more precise.

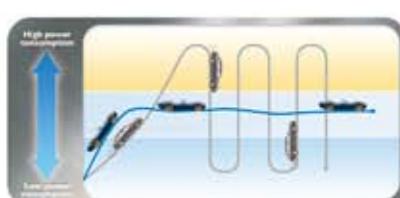

DC Inverter 180° Sine Wave

Compared with 120°Square Wave DC Inverter driving technology, the new 180° Sine Wave DC inverter driving technology has considerable advantages:

1. Applicable much wider range of frequency and voltage
2. More efficient and energy saving
3. Smooth running, low noise and vibration
4. More reliable in operation

Break through in inverter technology

Fresco Tech

Midea's Fresco Tech brings you clean and refreshing air and fills your room with the soothing scent of nature.

1. Silver Ion Filter

The Silver ion can kill bacteria or prevent their activity at very low density by destroying their inner-configuration and absorbing their elements in cells. Meanwhile, the Nano Silver attached on the filter release the Silver ion constantly to eliminate bacteria effectively.

4. Bio Filter

Bio Filter consists of a specialized biological enzyme and Eco filter. The Eco filter catches very small airborne dust particles and neurulities bacteria, fungi and microbes. Biological enzyme eliminates bacteria by dissolving their cell wall thus eliminating the problem of re-pollution.

5. Plasma Dust collector

The Plasma Dust Collector can generate an ionization zone. The air is converted to plasma as it passes the high voltage ion generator. 95% of the dust, smoke, and pollen particles are attracted to the electrostatic filter.

6. Ionizer

Anions can take care of your body. Anions can stimulate the blood circulation system, improve lung function and effectively prevent respiratory passage illnesses (Such as asthma and pneumonia).

7. Super Ionizer

Cutting edge technology releases Sterionizer to change surrounding bacteria structure, hence minimize bacteria level. The super Ionizer purifies the air and improve oxygen quality.

Environment Concern

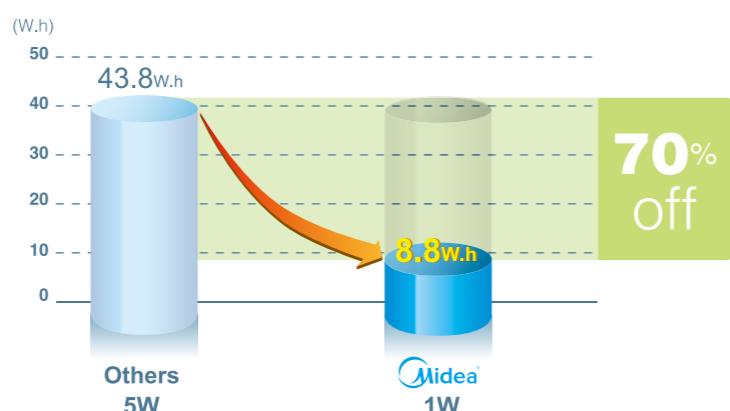

Environment protection is a hot topic all over the world. Environment concern is our responsibility and working philosophy. Work together with TUV, we take actions to comply European new REACH and Eup. directive.

Features

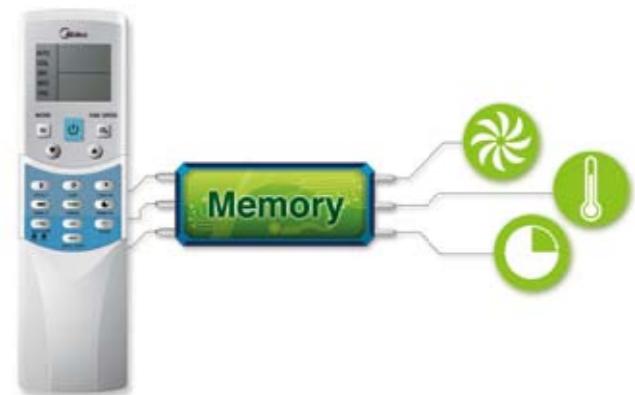

IW Standby

Intelligent on-off technology enables Midea products automatically enter energy-saving mode when standby, cut energy consumption from normal 4-5W to 1W which counts 70% of saving.

Remote Control

After you finish setting the air conditioner through remote control, the remote control can remember all the setting parameters itself. Next time when you start the unit with remote control, the unit will run under the mode that recorded. You don't need to set the parameters again, and enjoy more convenience.

Health

Silver Ion Filter

The Silver Ion, released from the Nano Silver that attached on the filter, can kill bacteria or deactivate them at very low density effectively and continuously by destroying their inner-configuration and absorbing their elements in cells.

Bio Filter

Bio filter consists of a specialized biological enzyme and Eco filter: The Eco filter catches very small airborne dust particles and neutralizes bacteria, fungi and microbes. Biological enzyme kills bacteria by dissolving their cell wall thus eliminating the problem of re-pollution.

Vitamin C Filter

The Vitamin C filter fills the air with Vitamin C, which softens the skin and reduce stress. The lifetime of this filter is approximately 2 years.

Active Carbon Filter

The filter is made up of Active Carbon layer and Electrostatic Fiber layer. Active Carbon eliminates certain kinds of odors such as ammonia (NH_3) and deactivates harmful chemical gas like formaldehyde (HCHO). By forming positive electrode on the filter surface, Electrostatic Fiber layer traps small dust particles, smoke and pet fur to prevent allergic reaction.

Plasma Dust Collector

The Plasma Dust Collector generates an high voltage electrostatic field. The air passing through this zone is converted to plasma, and 95% of the dust, smoke and pollen particles are attracted to the electrostatic filter.

Ionizer

Anions, always be found in forest or beside waterfall, can stimulate the blood circulation system in people's body, improve lung function and effectively prevent respiratory passage illnesses (such as asthma and pneumonia).

Self-Cleaning

When this function is activated, firstly the indoor unit operates as cooling mode with low fan speed, during this period the condensed water will take some dust on evaporator fins away. After the unit turns to heating operation with low fan speed, which dries the inside of indoor unit. Finally it turns to fan-only mode and blows away the wet air. The whole process cleans the internal side of indoor unit and prevents the breeding of bacteria.

Comfort

8°C Heating

In heating operation, the preset temperature of the air conditioner can be as lower as 8°C, which keeps the room temperature steady at 8°C for in winter.

PTC Auxiliary Heating

With a built-in PTC device, the heating operation is more powerful even in some extreme cold area.

Anti-Cold-Air (Heat Pump Only)

When starting the heating operation, the fan speed is regulated automatically from the lowest grade to the preset level, according to the temperature rising of evaporator. This function can prevent cold air blowing out at the beginning of the operation, which avoids the discomfort to the user.

Low Noise Airflow System

Without decreasing the airflow volume and capacity output, large diameter cross flow fan can bring down the indoor unit noise level by lowering the fan speed.

Turbo Operation

With this function, the air conditioner will maximize the output of cooling or heating capacity, make the room cool down or heat up rapidly, and attain the desired temperature in the shortest time.

Wide-Angle Airflow

The design of large louvers, with wide swing angle range, Guiding the cool or warm air to every corner of the room.

Temperature Compensation

Based on different installation height of indoor unit, the temperature deviation of the sensor sensed against the actual floor temperature always is different. Changing the jumping wires combination on the indoor PCB is possible to compensate the deviation. This could be achieved by installer in the installation field.

Independent Dehumidification

The individual dehumidification mode dehumidifies the room efficiently, but not lower the temperature so obviously as cooling operation.

Reliability

PTC Heating Belt

With a PTC heating belt fitted on the base plate of the outdoor unit, the rain, snow or defrosted water accumulating on the base plate is avoided.

Low Ambient Kit

The air conditioner with a special built-in Low Ambient Kit can be used in temp. as low as 15°C for cooling operation.

LCD Display

Control panel of indoor unit adopts LCD display.

Auto Changeover

In this mode, the air conditioner changes operation modes and capacity output automatically according to different preset and room temperature.

Turbo Operation

With this function, the air conditioner will

Valve Protection Cover

The cover protects the valves against impact during transportation. Furthermore, it also prevents the condensed water on the valve from dripping.

Two-speed Outdoor Fan Motor

With Two-speed Outdoor Fan Motor, the applicable temperature ranges of the outdoor unit are widened for both cooling and heating operation.

Sleep Mode

This function enables the air conditioner to automatically increase (cooling) or decrease(heating) 1°C per hour for the first two hours, then holds steady for the next 5 hours, after that it will switch off. This characteristic maintains both energy saving and comfort in night operation.

Soft-start Kit

With this kit, the big capacity units, especially for the type of consuming single phase power, will reduce starting current and weaken the impact to power grid significantly.

Hydrophilic Aluminium Fin

In indoor unit, heat exchanger using Hydrophilic Aluminium Fins improve cooling efficiency by enabling the unrestricted flow of condensed water between the fins. In outdoor unit, it improves heating efficiency by accelerating the defrosting process.

Quick Connector

For this kind of air conditioner, the installation is quite easy and facile and not so costly.

Wired Controller

Compared with infrared remote controller, Wired Controller can be fixed on the wall and avoid mislaying. It's mainly used for commercial zone and makes air conditioner control more convenient.

Auto-Restart

If the air conditioner breaks off unexpectedly due to the power cut, it will restart with the previous function setting automatically when the power resumes.

Convenience

Cleanable Panel

Front panel of the indoor unit is easy to be detached for periodic cleaning.

Flexible Wiring Connection

Terminal block makes the cable connection between indoor and outdoor units much more flexible.

2 Ways Piping Connection

Both left and right sides of the indoor unit are possible for outstretch of connective piping and drainage hose

Quick Connector

For this kind of air conditioner, the installation is quite easy and facile and not so costly.

Wired Controller

Compared with infrared remote controller, Wired Controller can be fixed on the wall and avoid mislaying. It's mainly used for commercial zone and makes air conditioner control more convenient.

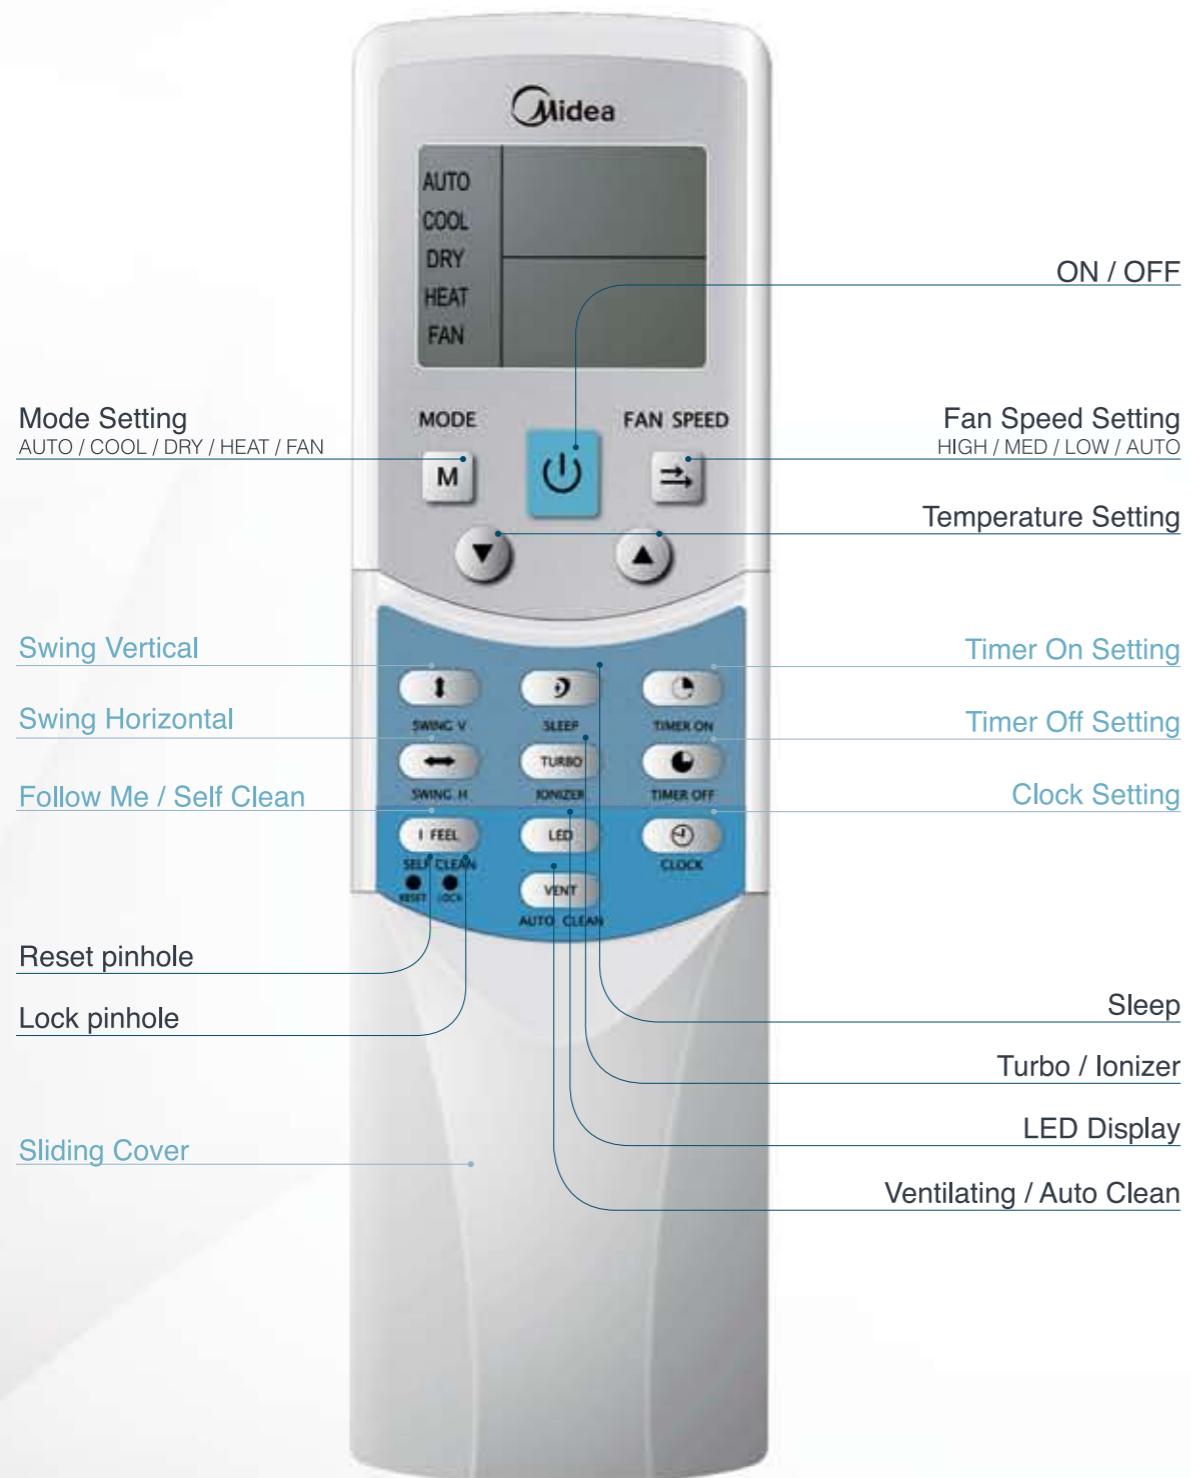

Auto-Restart

If the air conditioner breaks off unexpectedly due to the power cut, it will restart with the previous function setting automatically when the power resumes.

Super DC Inverter

Ultra High Efficiency

Midea's optimized refrigeration system is built by excellent compressor, high-efficiency motor and 4-bend heat exchanger. The energy consumption can be reduced by 30% compared with the energy Class A in common.

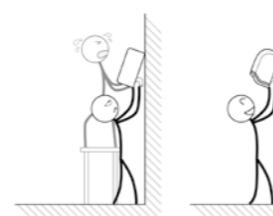

Super PLASMA Air Purifier

The PLASMA zone is a high voltage electrostatic generation field. With the larger size, Super PLASMA Air Purifier makes more air circulation and increases the quality of air purification.

Quick & Easy Installation

With a special designed collapsible bracket on the rear of indoor unit, the pipes connection work is easier and convenient which can save the installation time and cost.

Super-Silent Airflow System

Besides the technology of controlling the airflow volume and capacity output, a large diameter cross-flow fan can minimize the noise level of the indoor unit by lowering fan speed and optimizing air flow.

Split

DC Inverter 180° Sine Wave

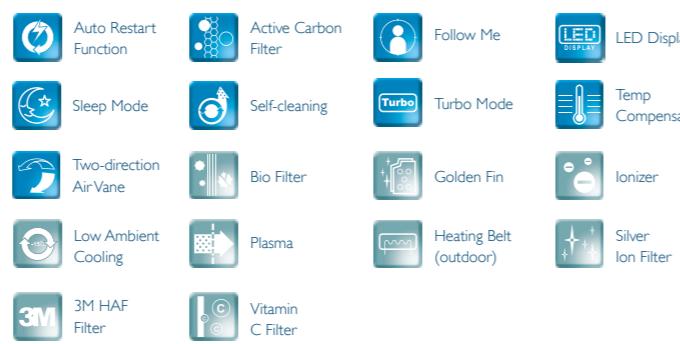

Midea DC Inverter Air-conditioner adopts the advanced 180° Sine Wave DC Inverter driving technology and Brushless DC (BLDC) motor (revolution variable) compressor. More energy-saving, more consistent, and quieter than 120° Square Wave DC Inverter.

3D DC Inverter

Besides the compressor motor, both of the indoor and outdoor fan motors are Brushless DC (BLDC) type. Owing to the function of BLDC motors, the 3D Inverter air conditioner gains higher efficiency and makes quieter operation which helps to save more energy and enhance comfort to consumers.

Super Slim Design

With super slim indoor unit, the fashionable design brings great visual enjoyment as the home decoration.

Super Ionizer

Ionizer+ is a device that ionizes the air by positive and negative high voltage electrodes simultaneously. When the positive ions and negative ions neutralized it will releases tremendous amounts of energy which can sterilize the air passed through and alter the structure of the bacteria nearby. Moreover, the residual negative ions not only eliminates odor, dust, smoke and pollen particles in the air, but also brings more fresh and healthy sensation to the users like staying in forest or closing to waterfall.

Features: Standard Optional

Vida Split

Follow Me

With this function, the room temperature sensor built in remote control is activated and replaces the sensor of in indoor unit. Then the air conditioner will control the room temperature based on the temperature around the remote controll, just like the air conditioner is following the user.

Self Clean

When this function has been activated, the indoor unit operates as cooling mode with low fan speed initially. Then during this period the condensed water will take some dust on evaporator fins away. After that the unit turns to heating operation with low fan speed which dries the inside of indoor unit. Finally it turns to fan-only mode and blows away the wet air. The whole process cleans the internal side of indoor unit and prevents the aspiration of bacteria.

Luna Split

Electronic Expansion Valve

Compared with conventional throttling by utilizing capillary, Electronic Expansion Valve (EEV) makes the refrigerant volume reasonable in the air conditioner system. Under the control of microcomputer, this device throttles up or down the refrigerant precisely according to the actual load situation, which optimizes the use of heat exchanger and improves energy efficiency. Furthermore, EEV extends the flexibility of the air conditioner; improves the performance under different temperature condition especially heating operation in extreme low temperature, also makes the room temperature control more precise.

Freeze Protection (8°C Heating)

In heating operation, the preset temperature of the air conditioner can be as low as 8°C, which keeps the room temperature steady at 8°C and prevents household from freezing when the house is vacant for a long time in severe cold weather.

Corona Split

Turbo Operation

With this function, the air conditioner will maximize the output of cooling or heating capacity, make the room cool down or heat up rapidly, and attain the desired temperature in the shortest time.

Sleep Mode

This function enables the unit to automatically increase (cooling) or decrease (heating) 1 °c per hour for the first two hours, then hold steady for the next 5 hours, after that the unit will stop operation. It can maintain the optimal temperature and save energy.

Glory Split

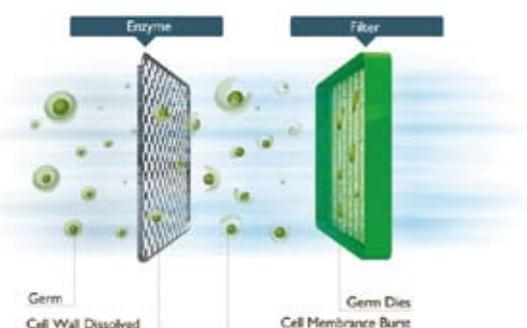

Two-direction AirVane

In cooling mode, the air vane opens upward, which directs the air horizontally. It allows for rapid and evenly distributed temperature fall. In heating mode, the air vane opens downward, which directs the air towards the floor. It allows for rapid and evenly distributed temperature rise.

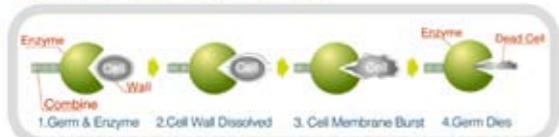

Bio Filter

Bio Filter consists of a specialized biological enzyme and Eco filter. The Eco filter catches very small airborne dust particles and neutrally bacteria, fungi and microbes. Biological enzyme eliminates bacteria by dissolving their cell wall thus eliminating their cell wall thus eliminating the problem of re-pollution.

R Split

TEMP Compensation

The ceiling temperature is often higher than the floor temperature. This function can automatically eliminate the temperature difference between them.

3M HAF Filter

The filter can collect the particles down to 0.1um. When equipped with Ionizer, the efficiency can be much more improved. The filter can protect itself from mildew breeding.
